

Fusion SecureDesktop

Homeworking made simple and secure

What is Fusion SecureDesktop (FSD)?

FSD is a configurable, secured kiosk front end that allows the user to use their home PC or laptop to connect to the company VDI systems using Windows connectivity clients.

Who is FSD best suited for?

FSD is best suited for:

- Home workers with their own PCs or laptops
- Workers using personal laptops at work (BYOD)

How is FSD shipped and licensed?

FSD is available as a simple download that is installed by the user onto their Windows PC or laptop. FSD is licensed on a per device basis and is supplied with a 6 month time-limited license. It is also available as a standard product with a perpetual license.

How does FSD work?

FSD uses a kiosk launcher that is secured from general launch. On launching, FSD asks the user for their PIN and then launches the kiosk front end. FSD uses a secure agent to communicate with the Fusion DM server, that can program FSD as needed.

What are the prerequisites for FSD?

You need a PC or laptop equipped with an x86 processor running Windows 7 or 10, network (wired or wireless), 5GB of storage space and internet access.

Can I manage an FSD device?

Yes, FSD is fully manageable using Fusion DM management software.

How effective is wireless networking?

Networking for FSD is 100% transparent, as it uses the underlying Windows networking to do its tasks. So if your Windows PC/Laptop is working in terms of networking, then it's good to go for FSD.

How does FSD handle power management?

FSD is a secured application layer running on your Windows PC/laptop, so Windows power management will continue to maintain optimal power usage.

Can I update FSD and its configuration?

Yes. FSD can be updated using Fusion DM, as can other software such as the Citrix or VMware client. Fusion DM can also be utilised to monitor the host PC/laptop.

Is support and maintenance available?

FSD is provided with a 6 month limited license including Fusion DM TPD license. Support and maintenance is included for the six months.

What does FSD support connection to?

FSD supports the following connection types:

- Citrix XenDesktop/XenApp full HDX
- VMware Horizon View (Blast/PCoIP)
- Microsoft RDS with RemoteFX
- Browser
- Any custom executable such as a VPN client

Can I use FSD as a replacement to my PC?

No, FSD is not an operating system, but rather a secured application layer allowing connections to remote VDI frameworks.

Can I use FSD with a Mac?

No, FSD does not work on a Mac directly, however you could use it within a Windows virtual machine running on the Mac.

Can I evaluate FSD?

Yes, there is an evaluation period of 4 hours provided. Clicking on the evaluate button on the license entry dialog will activate the evaluation using our license servers. Once the evaluation period is complete, you are invited to enter the license key and activate.

Can I still access my local peripherals and redirect them when using FSD?

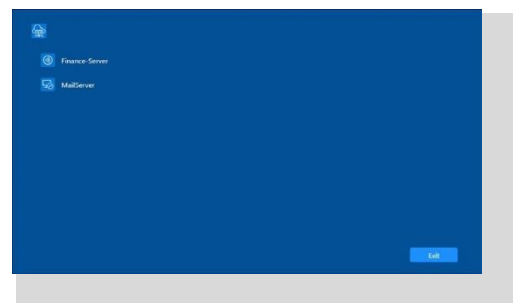

Yes, all the hardware ports such as USB and Printer are available to FSD. Everything that is available to your PC will be available to clients running within FSD.

Does FSD include the Fusion UEM license?

Yes, a Fusion DM TPD (third party device) license is included with support and maintenance for 6 months.

How can I evaluate and buy FSD?

To download, navigate to <https://www.vxlsoftware.com/homeworking>. When you are happy following evaluation, you can buy it from your Lenovo partner or by contacting Lenovo directly.
